

A questionnaire to help guide you through a universe of possibilities.

In today's investment world, it is essential to diversify your portfolio according to your financial position and investor personality. But how do you find your way through the maze of products on the market and choose what's right for you, without having to spend precious hours comparing your options and then tracking your investments?

SSQ Insurance offers a simple, yet effective solution. First, take a few minutes to answer the enclosed questionnaire. Second, follow the instructions to analyze your results. Third, you will be able to identify the SSQ Smart Beta Plus Portfolios, Strategy and Celestia Guaranteed Investment Funds (GIF) that best match your investment needs.

There are many advantages to our one-stop investment options: no matter how much you invest, you'll get a customized, diversified portfolio that is managed by reputable fund managers... with minimal fees.

## **SSQ Portfolios GIFs**

Each SSQ Portfolio GIF is designed to cater to a specific investor profile and includes a combination of specially-selected investment vehicles and fund managers. These funds allow you to automatically benefit from an asset mix carefully selected by expert fund managers to diversify your portfolio and maximize long-term investment growth. That way, you won't need to worry about making the wrong decision or investing on impulse!

The main investment objective of these diversified funds is to generate regular income and medium- to long-term capital growth. These funds invest in Canadian fixed income securities issued by the federal government, provincial governments and mainly blue-chip companies. They also invest in the equities of large-cap Canadian, U.S. and international companies. Some of the funds also invest in specialty funds.

For each question, choose the answer that best describes you.

When investing, it is important to establish your investment time horizon. If you want to be able to have access to your investments in the short term, you should choose more conservative investments, for which you do not risk losing capital. However, if your vision is more long-term, you can choose investment products with a higher level of risk that offer good long-term results.
